PROFILE

Gameplay and AI programmer with 6+ years shipping VR/XR titles in Unity and Unreal. Eight released experiences across Meta Quest, PCVR and WebGL, including work produced for the U.S. Department of State and the award-winning VR documentary Spots of Light. Specialises in enemy AI and behaviour systems (Behaviour Trees, GOAP, EQS, Unity ECS/DOTS), player interaction and locomotion, and editor tooling that cuts iteration time for the whole team. Comfortable owning a system end to end — from prototype to shipped, performance-budgeted build.

SHIPPED & RELEASED TITLES

Winterover — [Meta Quest](#) — Gameplay Programming, Systems Engineering, VFX
We the People — [Meta Quest](#) — Gameplay, Audio — *produced for the U.S. Department of State*
Spots of Light — [Meta Quest](#) — Gameplay, VFX, Audio — *award-winning VR documentary*
The Holy City — [PCVR](#) — Technical Direction, Gameplay Design — *interactive volumetric-capture documentary*
Crew Manifest — [WebGL](#) — Gameplay Programming & Design
Xenophilia — [PCVR](#) — Gameplay Programming & Design — *3D digital-twin network*
Niall's Apprentice — [PCVR \(HP Omnicept\)](#) — Gameplay, Production — *world reacts to live heart rate, EEG and eye tracking*
Events at Unity Farm — [PCVR](#) — Gameplay, Production

EXPERIENCE

Lead Unity Developer · Blimey / Holy City VR Inc. 04/2023 – Present | Toronto, ON

- Lead Unity development across [X] concurrent VR productions, owning gameplay architecture, code review and technical direction for a team of [X] engineers and artists.
- Architected a reusable XR interaction and locomotion framework now used across [X] shipped titles, reducing new-project setup from [X weeks] to [X days].
- Shipped Winterover, We the People and Crew Manifest to Meta Quest and WebGL, holding a [72/90] FPS budget on standalone Quest hardware through profiling, draw-call batching and GPU-instanced VFX.
- Partnered directly with directors and clients (including U.S. Department of State stakeholders) to translate narrative and design intent into shippable interactive systems.
- Built custom Unity editor tools for scene authoring and content pipelines, cutting designer iteration time by roughly [X%].

Senior Unity Developer · Holy City VR Inc. 07/2021 – 03/2023 | Toronto, ON

- Designed and built the studio's core VR framework — interaction, locomotion, save/state and input abstraction — reused across [X] projects and still in production today.
- Delivered Spots of Light and The Holy City, both award-recognised VR experiences, contributing gameplay systems, VFX and technical direction.
- Implemented biometric-driven gameplay for Niall's Apprentice on the HP Omnicept headset, mapping live heart rate, eye tracking and EEG data to real-time world and difficulty response.
- Optimised volumetric-capture playback and streaming for standalone headsets, reducing [memory footprint / load times] by [X %].

Senior Game Programmer (Contract) · TITAN1 Studios 01/2021 – Present | Toronto, ON

- Designed and built a full-featured custom AI toolset for Unity used studio-wide to author enemy behaviour across VR titles — node-based behaviour graph, runtime debugging overlay and reusable action library.
- Implemented GOAP and behaviour-tree driven enemy archetypes, giving designers authorable AI without engineering support and cutting AI iteration time by [X%].
- Maintained and extended the tool across [X] internal projects, supporting other programmers as the system owner.

Gameplay Programmer · TITAN1 Studios 06/2020 – 12/2020 | Toronto, ON

- Implemented core gameplay mechanics, player controllers and UI systems for XR and multi-platform IP projects.
- Prototyped [X] gameplay concepts from design docs to playable builds, informing greenlight decisions.

SYSTEMS & TOOLS PROJECTS

- AI Advanced Tool (Unity) — node-based AI authoring toolset with live debugging and rapid behaviour iteration.
- Goal Oriented Action Planning — planner-driven agents that sequence actions dynamically for believable, reactive behaviour.
- Flock AI + Genetic Algorithm — emergent flocking agents evolved across generations via a genetic algorithm.
- Drone AI — autonomous navigation and decision-logic simulation focused on responsive movement.

TECHNICAL SKILLS

Engines Unity (URP, ECS/DOTS, XR Interaction Toolkit), Unreal Engine 4/5 (C++ & Blueprints), CryEngine

Languages C#, C++, C, HLSL/Shader programming, Java, Python, XML

AI Behaviour Trees, GOAP, EQS, Finite State Machines, Steering & Flocking, Pathfinding, Genetic Algorithms

Gameplay Player controllers & locomotion, XR interaction, physics, animation programming, cinematics, UI, level design

Platforms Meta Quest 2/3, PCVR (SteamVR, OpenXR, HP Omnicept), WebGL, PC, Mobile

Tools Unity Profiler, RenderDoc, Git, Perforce, Jira, Asana, Trello, Visual Studio, Rider/CLion, CMake

Art / DCC Maya, 3ds Max, Blender, ZBrush, Substance, Photoshop, After Effects

EDUCATION

Game Programming (Unreal C++/Blueprints, Unity C#) · ISI, Montreal 2019 – [end date]

B.Sc., Information Technology · A. D. Patel Institute of Technology 2014 – 2018 | India

Relevant coursework: AI crowd simulation, computer graphics, big data, IoT.
